

- Create analysis workflow
- Define which SQL queries will answer each business question
- Map queries to presentation insights

Plan analysis approach in Miro

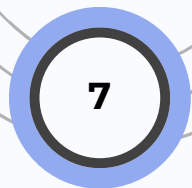

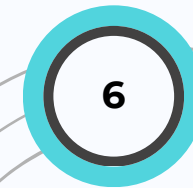

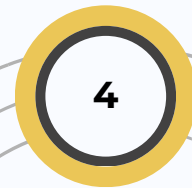

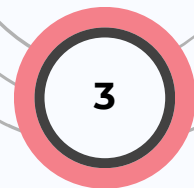

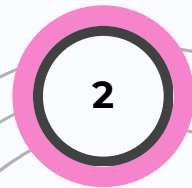

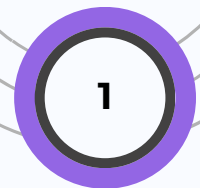

- Export query results from Databricks
- Download results as CSV / Excel file

Export processed dataset

- Design slides in Canva
- Add charts and insights
- Write key takeaways
- Add recommendations

Create the final presentation

Review Coffee Shop Case Study

- Read the full coffee shop case study
- Understand business objectives
- Identify key questions to answer
- Identify important columns (date, location, product category, revenue, etc.)

Write SQL queries in Databricks

- Load dataset
- Clean data if needed
- Write SQL queries for analysis
- Aggregate revenue by key dimensions
- Validate query results

Create Pivot Tables & Graphs

- Import CSV into Excel
- Create pivot tables
- Generate charts for:
 - Revenue by store location
 - Monthly revenue trend
 - Revenue by product category
 - Revenue by time of day
 - Revenue by weekday

Upload project to GitHub

- Upload:
 - SQL queries
 - Dataset
 - Excel analysis
 - Canva presentation (PDF)
- Write README file explaining:
 - Project objective
 - Tools used
 - Key insights
 - Recommendations
